THE SUMP WITH THE RIGHT LEVEL FOR A SOPHISTICATED, DIVERSE CELLAR DESIGN

To use basements meaningfully and to change into modern laundry rooms - that's no problem with the new Baufix 100. The underfloor sump offers the ideal solution in order to dispose sewage water from washing machines, wash basins, shower or kitchen sinks, below the back-pressure level.

Without formwork, the pressure-resistant PE sump can be placed into the concrete bed as a collecting tank for the underfloor pipework.

Installation in areas with high groundwater levels is possible thanks to the **groundwater seal** (accessories).

A special convenience is offered by the guide rail system GR 32 for Baufix 100 (accessories), so the pumps U3KS, U5KS and U6KS ES/DS can be removed for simple and rapid maintenance.

According to the volume of sewage water, or as individually required, the pumps US 62-103 ES/DS can be installed in the sump.

- | PRESSURE RESISTANT SUMP
- | INSTALLATION IN AREAS WITH HIGH GROUND WATER LEVELS
- | SEAL COLLAR FOR ATTACHING TO THE CUSTOMER'S THIN-BED WATERPROOFING SYSTEM
- | BAUFIX 100 MAT. NO. JP47214

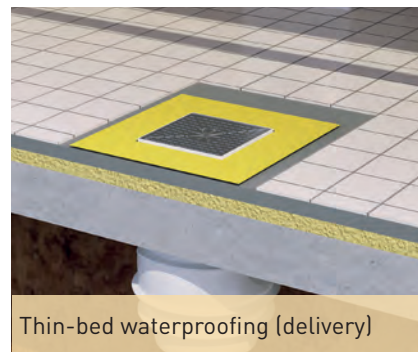

THE NEW OPPERTUNITIES

Groundwater seal (JP47216)

Guide rail system GR 32 Baufix (JP46706)
